

## Nylon Double Braid

High strength, high stretch and torque-free, this rope features a nylon core inside a soft flexible nylon cover. High elongation and excellent shock absorption properties make nylon ideal for applications involving shock loads. Good resistance to abrasion, UV rays and many common chemicals.

### Features:

- Soft-hand feel
- Suited for mooring and anchor lines
- Easy to knot or splice

## Polyester Double Braid

Leader among all popular fibers for weatherability characteristics, polyester exhibits excellent abrasion resistance and strength, wet or dry. Good resistance to UV light and most common chemicals. This very-low stretch rope offers excellent gripping properties and a torque-free construction.

- Low stretch and high strength
- Holds up better than nylon in sunlight
- Great abrasion resistance
- Will not rot or deteriorate
